

Panel 22

ORCAS, OCEANS AND US

As top predators, orcas are an indicator of ocean health. It's clear that something is wrong when the bodies of orcas like Rhapsody are treated as toxic waste.

For healthy orcas, and healthy humans, we need healthy oceans. Our oceans are dying because of overfishing, climate change and pollution. How can we reduce our impact? How can our communities, local, national and international, create less waste?

“If the oceans die, we die.”
—Sea Shepherd founder, Paul Watson
